

2003 6th GRADE MAIN RANGEFINDER 3

It is important that you show or explain how you solved the problems on this assessment. If you use a calculator, show how you set up the math.

1. A 6th grade class of 30 students at Sunset School earned an ice cream party. They have \$45.00 to spend.

ITEM	SERVINGS	COST
Hot Fudge	6	\$2.45
Whipped Cream	10	\$1.30
Cherries	15	\$0.85
Ice Cream	12	\$8.25

- a. How many containers of ice cream are needed for each student to have one serving?
Show or explain how you found your answer.

Adequate processes

3

ice cream containers

3 three ice cream containers
x 12 servings in an ice cream container

36 is enough for servings for each person

- b. What is the total cost of the ice cream party if each student has ice cream, hot fudge, whipped cream and a cherry? How much change will be returned from the \$45.00? Show or explain how you found your answer.

change total cost
2.40 42.60
24.75 = 12.25

2.45
x 5
12.25

1.30
x 3
3.90

8.25
x 3
24.75

1.85
x 2
3.70

- c. About how much will one serving of hot fudge cost? Show or explain how you found your answer.

16
6 12.45
24
05

40¢

cost of one serving

- d. When the party was over, there was $\frac{1}{4}$ of a container of ice cream left and $\frac{1}{4}$ of another container of ice cream left. What fraction of one whole container would be remaining? Show or explain how you found your answer.

$\frac{1}{4}$
+ $\frac{1}{4}$
= $\frac{2}{4}$

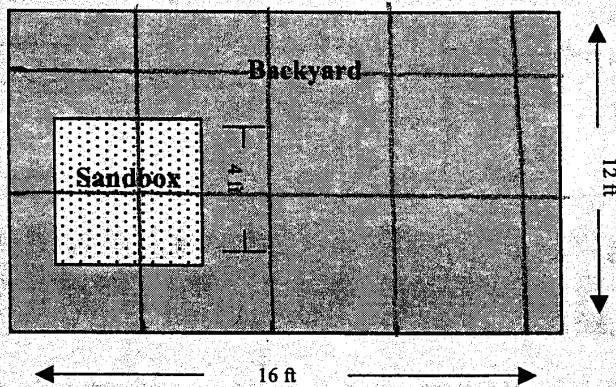

$\frac{1}{2}$

of a container is left

Understanding of situation:

Read problems 2, 3, 4, and 5 on this and the next two pages. Select three problems to answer. Answer ALL of the parts of the three problems you select to answer. Cross out the one problem that you do not choose to answer.

2. A family has decided to put a square sandbox in their backyard.

Proficient application of basic skills

- a. What is the perimeter of their backyard? Show or explain how you found your answer.

$$\begin{array}{r} 12 \\ +12 \\ \hline 24 \end{array} \quad \begin{array}{r} 16 \\ +16 \\ \hline 32 \end{array} \quad 24 + 32 = 56 \text{ ft is their perimeter}$$

- b. In order to put a wooden border around the sandbox and the backyard, how much border is needed? Show or explain how you found your answer.

$$4 \times 4 = 16 \text{ ft of wooden boarder}$$

- c. The wooden border is sold in 1 yd sections. How many sections does the family need to purchase? Show or explain how you found your answer.

$$3 \text{ ft} = 1 \text{ yd}$$

$$\begin{array}{r} 3 \\ \times 5 \\ \hline 15 \end{array} \quad \begin{array}{r} 3 \\ \times 6 \\ \hline 18 \end{array}$$

they need 6 yds of border

- d. What is the area of the sandbox and what fraction of the total backyard area is this? Show or explain how you found your answer.

16 ft perimeter of sand box
56 ft perimeter of backyard

$$\begin{array}{r} 18 \\ 3 \overline{)56} \\ \hline \end{array}$$

$$\frac{1}{8}$$

1 yd = 3 ft
10 ft = 3 yd + 1 ft

3. Jordan's piano practice times are shown in the table below.

Minutes Jordan Practiced						
Day	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
Minutes	30	22	45	15	26	30

Well-defined structure

- a. What is her average (mean) practice time? Show or explain how you found your answer.

$$\begin{array}{r} 30 \\ 22 \\ 45 \\ 15 \\ 26 \\ +30 \\ \hline 168 \end{array}$$

$$6 \overline{)168}$$

(28)

is the mean of the minutes she practiced

- b. What is the mode of her practice times? Show or explain how you found your answer.

(30), 22, 45, 15, 26, (30)

(30) is the mode

- c. Using the Jordan's six practice times, find her median practice time. Show or explain how you found your answer.

lowest 15, 22, 26, 30, 30, 45 highest

$$\begin{array}{r} 26 \\ +30 \\ \hline 56 \end{array}$$

(28) is her median practice time

- d. The piano teacher wants Jordan to practice 30 minutes a day. How many minutes will she have to practice on Sunday to have a mean practice time of 30 minutes? Show or explain how you found your answer.

she has to practice 42 minutes on Sunday

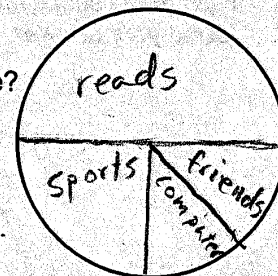

$$\begin{array}{r} 6 \\ +168 \\ \hline 174 \end{array}$$

$$\begin{array}{r} 42 \\ +168 \\ \hline 210 \end{array}$$

Effective communication skills

4. The circle below represents Mike's free time. Mike reads during $\frac{1}{2}$ of his free time. Sports take up $\frac{1}{4}$ of his free time. He works on his computer $\frac{1}{8}$ of his free time. The rest of his free time is spent hanging out with his friends.

- a. Use the circle at the right to graph how Mike spends his free time? Label the graph and each section.

- b. What fraction of his free time is spent hanging out with his friends? Show or explain how you found your answer.

on the chart there is only an $\frac{1}{8}$ of his free time left. So it must be $\frac{1}{8}$ of his free time

- c. If he spends 60 minutes reading, how many minutes are spent working on his computer? Show or explain how you found your answer.

(15) minutes on the computer

$$8 \overline{)120} \text{ in all the min.}$$

Adaptable processes

5. Terry used Popsicle sticks to make the first four figures of the pattern below.

Figure 1

Figure 2

Figure 3

Figure 4

- a. Complete the table by using the pattern from the figures. *Show or explain how you found your answer.*

Figure Number	Number of Sticks
1	4
2	7
3	_____
4	_____

- b. How many sticks are required to make figure 7 in the pattern? *Show or explain how you found your answer.*

- c. How many sticks are required to make figure 25 in the pattern? *Show or explain how you found your answer.*

- d. Let n represent the number of the figure. Write a mathematical expression or rule that explains the relationship between the number of the figure and the number of sticks needed. *Show or explain how you found your answer.*
